■ Key Findings & Insights ■ Key Findings Stable Areas Quality Assessment: No modules achieved the 90% pass rate threshold required for "stable" classification Current Status: All tested modules show performance below the stability threshold, indicating widespread quality concerns Risk Level: High - The overall test execution results suggest significant quality issues that need immediate attention Recommendation: Focus on identifying and addressing root causes of failures before proceeding with release Risky Areas Overall Quality Risk: Pass rate of 66.7% is below conditional threshold (95%) Critical Defects: 3 critical defects require immediate attention Major Defect Volume: 6 major defects exceed acceptable limit (2) API Testing module needs attention with 60.0% pass rate Authentication module needs attention with 20.0% pass rate Order Management module needs attention with 60.0% pass rate User Management module needs attention with 60.0% pass rate Authentication module shows high defect density (80.0%) ■ Lessons Learned ■ Lessons Learned What Went Well Excellent test execution rate of 100.0% (45/45 tests) No blocked tests - test environment was stable No flaky tests identified - test reliability is good Areas for Improvement Low pass rate of 66.7% indicates quality concerns 3 critical defect(s) require immediate attention High number of major defects (6) indicates quality issues Low pass rates in modules: Authentication High defect density in modules: Authentication ■■ Variances & Deviations ■ Variances/Deviations Test Execution Variances Pass Rate Deviation: Pass rate of 66.7% is significantly below expected threshold. Quality concerns may indicate widespread issues. Conduct root cause analysis and implement quality gates. Critical Defect Deviation: 3 critical defect(s) found - release blocker. Critical functionality is compromised, release should be delayed. Immediate defect resolution and re-testing required. Major Defect Deviation: 6 major defect(s) exceed acceptable threshold. Significant functionality issues may impact user experience. Prioritize major defect resolution before release. Module Pass Rate Deviation: Low pass rates in modules: Authentication. Specific modules show poor quality indicators. Review and improve test cases for low-performing modules. Module Defect Density Deviation (High): High defect density in modules: Authentication. Specific modules show excessive defect rates. Focus additional testing and development effort on high-defect modules.

■ Key Findings & Insights ■ Key Findings Stable Areas Quality Assessment: No modules achieved the 90% pass rate threshold required for "stable" classification Current Status: All tested modules show performance below the stability threshold, indicating widespread quality concerns Risk Level: High - The overall test execution results suggest significant quality issues that need immediate attention Recommendation: Focus on identifying and addressing root causes of failures before proceeding with release Risky Areas Overall Quality Risk: Pass rate of 66.7% is below conditional threshold (95%) Critical Defects: 3 critical defects require immediate attention Major Defect Volume: 6 major defects exceed acceptable limit (2) API Testing module needs attention with 60.0% pass rate Authentication module needs attention with 20.0% pass rate Order Management module needs attention with 60.0% pass rate User Management module needs attention with 60.0% pass rate Authentication module shows high defect density (80.0%)

What Went Well

Areas for Improvement

■■ Variances & Deviations ■ Variances/Deviations Test Execution Variances Pass Rate Deviation: Pass rate of 66.7% is significantly below expected threshold. Quality concerns may indicate widespread issues. Conduct root cause analysis and implement quality gates. Critical Defect Deviation: 3 critical defect(s) found - release blocker. Critical functionality is compromised, release should be delayed. Immediate defect resolution and re-testing required. Major Defect Deviation: 6 major defect(s) exceed acceptable threshold. Significant functionality issues may impact user experience. Prioritize major defect resolution before release. Module Pass Rate Deviation: Low pass rates in modules: Authentication. Specific modules show poor quality indicators. Review and improve test cases for low-performing modules. Module Defect Density Deviation (High): High defect density in modules: Authentication. Specific modules show excessive defect rates. Focus additional testing and development effort on high-defect modules.

Variances/Deviations Test Execution Variances Pass Rate Deviation: Pass rate of 66.7% is significantly below expected threshold. Quality concerns may indicate widespread issues. Conduct root cause analysis and implement quality gates. Critical Defect Deviation: 3 critical defect(s) found - release blocker. Critical functionality is compromised, release should be delayed. Immediate defect resolution and re-testing required. Major Defect Deviation: 6 major defect(s) exceed acceptable threshold. Significant functionality issues may impact user experience. identified across 9 modules Critical Issues: 3 critical defects require immediate attention Most
Affected Module: Authentication with 4 defects Defect Density: 33.3% of test cases resulted in
defects Recommendations ■ Critical Priority: Address 3 critical defects before release ■ Module
Focus: Authentication module needs additional testing and debugging ■ Quality Improvement:
Implement additional test coverage for high-defect areas
